

Find Information on Healthy School Environments Faster

More than 53 million children and 3 million adults spend a significant portion of their days in approximately 117,000 public and private K-12 school buildings. Many of these school buildings contain environmental conditions that may pose health risks to students and staff and inhibit learning.

EPA has launched a new “one-stop” shopping Healthy School Environments Web Portal to help schools address environmental health issues and improve their school facilities.

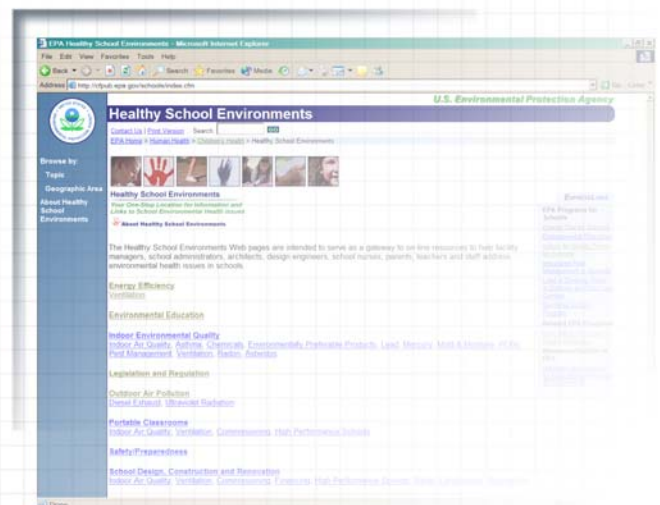

The Healthy School Environments Web Portal contains information for:

- Facility Managers
- School Administrators
- Architects
- Design Engineers
- School Nurses
- Parents
- Teachers
- Students

The Healthy School Environments Web Portal provides links to information resources developed by:

- EPA
- Other federal agencies
- State and local governments
- Non-governmental organizations

Visitors can browse resources by topic, by geographic area, or find specific information by key word search.
